Sabert Delivers Packaging Solutions with No Intentional PFAS

As a responsible food packaging manufacturer, it is important to address the continual concern over the use of PFAS (Per- and polyfluoroalkyl substances) in food packaging. Sabert is committed to providing quality products that meet the highest standards of health and food safety, and has acted to meet the needs of our customers amidst changing market conditions.

Transitioning to products with No Intentional PFAS

Since 2020, Sabert has been committed to the removal of intentionally added PFAS in our compostable product portfolio. Our offering currently contains over 40 products manufactured without the intentional addition of PFAS that meet a variety of fitness for use applications.

These products serve as a compliant packaging option in state/cities that have already or will soon be enacting legislation for PFAS in food service packaging. Sabert's entire product portfolio will be free from intentionally added PFAs by the end of 2023.

New Innovations Meet Safety and Performance Targets

Sabert's Global Center for Innovation is known for developing proprietary technology and applying innovative material science to solve everyday challenges for the food and beverage markets.

Our team has worked diligently to develop new Non PFAS chemistry that delivers quality product performance. A few of the ways we have been able to achieve this has been through:

- Use of fiber embedded with non-fluorine based additives
- PFAS-free coating for aggressive oil/grease applications, employing new Sabert technology using FDA approved and BPI certified ingredients
- Non-fluorine chemistry to target specific applications

Please contact your Sabert representative or email sustainability@sabert.com to learn more about our sustainable packaging solutions.
