SECTION V. HEALTH AND SAFETY DATA
Route(s) of Entry: Skin and eye contact, oral ingestion, inhalation.
Health Hazards (Acute and Chronic): Mild skin, eye, mucous membrane and respiratory irritant.
Signs and Symptoms of Exposure: Prolonged skin contact or direct contact with eye may result in superficial temporary irritation similar to those produced by other household detergents. Ingestion may result in mild gastrointestinal irritation with nausea, vomiting and diarrhea. Inhalation: No hazards under normal conditions of product use or within the occupational exposure guidelines. Unusually high exposures may cause coughing or irritation of nose and throat.

Prolonged, excessively high exposures to respirable crystalline silica may result in reduced lung function in some individuals. IARC has found sufficient evidence to classify crystalline silica as a carcinogen in animals, but there is limited evidence in humans.
